

MuleSoft

MuleSoft created an accelerator solution to help multiple customers adopt the BIAN model.

The organization helped its banking customers adopt the framework by providing them with API specifications and API templates that are BIAN compliant. MuleSoft achieved a faster time to market with the BIAN framework and enabled banks to integrate with fintechs more easily through the standardized BIAN approach. It also enabled customers to focus on interoperability both internally and with external third parties.

Eran Agrios, SVP & GM of Financial Services, Salesforce [MuleSoft] says:

“ The BIAN framework will enable banks globally to integrate with external companies and support the move towards Open Banking more easily. We selected BIAN because it is the standardized framework that is most requested by customers. ”
