

The BIAN
Transformation
Award Winner

BEST-IN-CLASS PARTNER

Play Digital Consulting

Play Digital Consulting wanted to support its customers in modernizing their financial products. To do so, it adopted Evolve, the methodology developed by Play Digital Consulting to implement BIAN, to decouple monolithic applications based on The Open Group TOGAF® Standard 9 Layer Architecture approach providing the first methodology capable to transform decoupled applications, such as the Coreless Banking concept.

Play Digital Consulting adopted BIAN, alongside Evolve, to give the banks a combination of methodology and standards to support the implementation of any IT decoupling process across the banking sector.

Without this methodology, two projects failed, but Play Digital Consulting were able to rectify these projects following the adoption of BIAN. Play Digital Consulting were able to design digital products in eight weeks and fully decouple and automate processes in four months instead of the 12 months it took before. The cost and time needed for the integration and microservice lifecycle have also significantly reduced.

Francisco Gomez, Director General, Play Digital Consulting said,

“ We chose BIAN because of its maturity. With BIAN, we are facilitating and standardizing the way we design products, modernize applications and design APIs. ”
